QuickSplint® 

TEMPORARY BITE PLANE
for **COSMETIC DENTISTRY**

Easy-to-Fabricate, Comfortable and Safe

Custom-fit in under 5 minutes, the QuickSplint® temporary bite plane is a practical and affordable solution for common clinical challenges in cosmetic dentistry. Designed for short-term overnight wear.

✓ **Diagnose Bruxism**

Don't let undiagnosed bruxism compromise your restorative cases. QuickSplint® makes it easy to gauge the presence and severity of bruxism before restorative material selection.

✓ **Simplify Deprogramming and Centric Bite Records**

QuickSplint® seats the condyles in centric relation by eliminating muscle hyperactivity. QuickSplint® is time-saving and easy to reline for staged treatment.

✓ **Protect Temporaries and Newly Placed Veneers**

Use QuickSplint® as an extra measure of protection to inhibit overnight clenching, ensuring that patients will not dislodge temporaries or veneers and be back in your office for help.

✓ **Minimize Post-op Jaw Sprain/Strain from Long Dental Procedures**

Trauma can occur when the mouth is open too wide or for too long, resulting in strain to

the masticatory muscles and/or sprain to the TMJs. Help your patient's jaw relax and recover by providing QuickSplint® for short-term overnight wear.

"QuickSplint® is my 'go to' temporary appliance to aid in diagnosis and therapy of TMJ and bruxism related conditions. Applications range from pain management to deprogramming and as a protective appliance for a variety of dental procedures, making QuickSplint® a product that I use daily to enhance both my toolbox and my patient's experience."

Nada Albatish, DDS
Director of Study Clubs in the Six - Toronto
Affiliate of Seattle Study Club

"Why my patients come in with jaw pain, the first thing I do is give them a QuickSplint®. From there we can triage - is it their occlusion, muscle inflammation or their joints? QuickSplint® comes in a convenient small package and it truly is the small and mighty appliance we include in our courses."
